Careers in the healthcare sector are wide and varied.

There are lots of opportunities to work with patients, professionals and policy-makers. For most career routes, you will need to undertake specific courses or training before you can become fully qualified to work in that role. Courses or training might need to be undertaken at college or university, but it may also be possible to train on-the-job as part of an apprenticeship or trainee programme.

About these illustrations

The following 6 posters illustrate the various responsibilities, tasks and roles of various healthcare professionals. They have been designed to help generate discussion and inspire young people to think positively about entering a career in healthcare.
